OPTION / MAINTENANCE TOOLS

Whetstone Rack

The stable whetstone racks are made of high-quality, non-slip rubber. Using a tray that prevents the surrounding area from getting dirty with sharpening mud or water from the whetstone will keep your kitchen clean.

Screw type for secure fastening

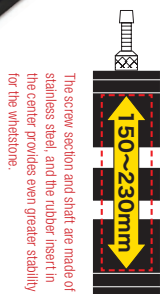

*Supports widths up to 230mm

No.33

Screw-Type Whetstone Rack [Jumbo]

Size of storable whetstone: Apr. 150~230mm (customizable)
 Package size Apr. 320×90×40mm
 Apr. 800g Q'ty/carton 10 pieces

Value Price **4,200 yen (excl. VAT)**
 4966684021013

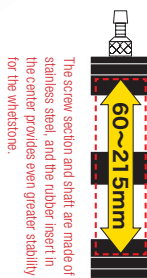

The screw section and shaft are made of stainless steel, and the rubber insert in the center provides even greater stability for the whetstone.

No.39

Screw-Type Whetstone Rack [Light]

Size of storable whetstone: Apr. 60~215mm (customizable)
 Package size Apr. 295×82×32mm
 Apr. 420g Q'ty/carton 12 pieces

Value Price **2,800 yen (excl. VAT)**
 4966684112223

The screw section and shaft are made of stainless steel, and the rubber insert in the center provides even greater stability for the whetstone.

Completely one size fits all

SKG-42

Free Whetstone Rack

Size of storable whetstone: all
 Package size Apr. 240×80×20mm
 Apr. 120g Q'ty/carton 12 pieces

Value Price **1,800 yen (excl. VAT)**
 4966684021471

The bottom surface is lined with a special rubber lining, making it less slippery than before.

Whetstone Tray

[Plastic type]

GT-0

Whetstone Tray

Size 334×167×21mm
 Package size Apr. 340×170×28mm
 Apr. 180g Q'ty/carton 20 pieces

Value Price **1,400 yen (excl. VAT)**
 4966684112131

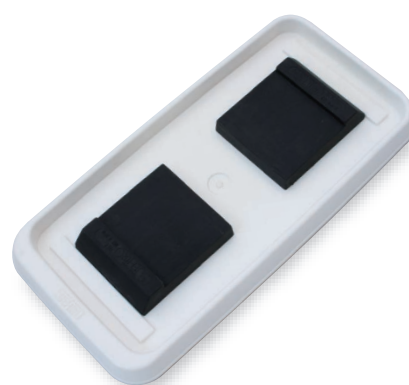

This is a dedicated whetstone holder for the GT-7. It supports whetstones up to 220mm wide (large size whetstone).

GT-7

Whetstone Tray (with Whetstone Rack)

Size of storable whetstone: Apr. 150~230mm (customizable)
 Package size Apr. 340×170×60mm
 Apr. 980g Q'ty/carton 10 pieces

Value Price **5,000 yen (excl. VAT)**
 4966684112162

GT-1

Whetstone Tray (with Whetstone Rack)

Size of storable whetstone: all
 Package size Apr. 340×170×28mm
 Apr. 400g Q'ty/carton 20 pieces

Value Price **3,000 yen (excl. VAT)**
 4966684060418

[Silicone type]

ES-80

Whetstone Holding Sheet [regular]

Size of storable whetstone: Apr. 95×250mm
 Package size Apr. 375×135×14mm
 Apr. 190g Q'ty/carton 10 pieces

Value Price **2,500 yen (excl. VAT)**
 4966684063112

ES-40

Whetstone Holding Sheet [small]

Size of storable whetstone: Apr. 58×192mm
 Package size Apr. 270×122×14mm
 Apr. 130g Q'ty/carton 10 pieces

Value Price **1,800 yen (excl. VAT)**

Rack for SKG Whetstone

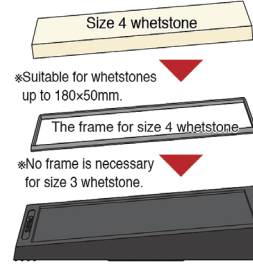

These whetstone racks are compatible with size 3 and size 4 whetstones.

— For size 3 whetstone —
A frame is not needed for size 4 whetstone.

*Suitable for whetstones up to 183x63mm.

— For size 4 whetstone —

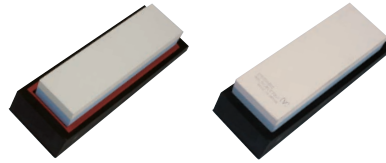

*Suitable for whetstones up to 180x50mm.

*No frame is necessary for size 3 whetstone.

For size 4 whetstone

For size 3 whetstone

Only use the rubber rack for size 3 whetstone (e.g. SKG-21/SKG-22/SKG-23/SKG-24/SKG-25). Use with the red frame for size 4 whetstone (e.g. SKG-43/SKG-44).

The bottom surface is lined with a special rubber lining, making it less slippery than before.

Angled base for easy sharpening

As an angled whetstone rack

Dual-purpose: Angled and Flat

As an angled whetstone rack

The Angled Whetstone Rack can be converted into a flat rack with an attachment.

SKG-26

Inclined All-Rubber Rack for SKG Whetstone Size 3 / 4

Maintenance Tools

Whetstones for Adjustment

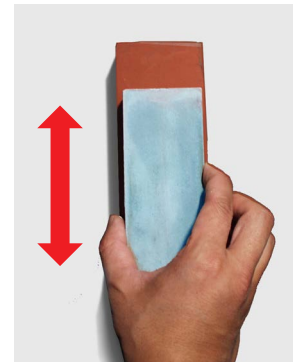

Video on Whetstone Maintenance ▶

If the whetstone is uneven, it will result in uneven sharpening, and you won't be able to achieve a properly sharp edge.

Make sure to keep the whetstone surface flat at all times by using a flattening whetstone.

When the initial sharpening feel is lost due to uneven wear or clogging from dirt after use, the surface of the whetstone is corrected to be flat. #100 correction stones (SS-1, 1B005) are for correcting coarse to medium grit whetstones, and #280 correction stones (SS-2, 2B006) are for correcting medium to finishing whetstones. If the whetstone surface is severely uneven, perform rough correction with #100 or Tairagain, and finally finish the surface with #280. If the surface still feels rough, it is also good to rub it together with a whetstone of a similar grit size. Perform the correction work while applying (rinsing) water.

Marking the surface you want to smooth will make it easier to see how smooth it is.

*It is important to keep the surface of the whetstone you are sharpening wet at all times.

The case cover can be used as a handle.
Includes a case cover opener.

*Please soak thoroughly in water before use.

SS-1

Whetstone-Flattening Whetstone for Medium and Coarse Whetstones with case

#100 Size Apr. 206×53×27mm

4966684010765

Diamond Whetstone for Surface Restoration

Ideal for surface restoration of non-absorbent, hard whetstones.

Double-sided diamond surface whetstone for surface restoration #150 / #500
Double-sided electrodeposited diamond whetstone for surface restoration. Strong diamond surface restores dented whetstone surface immediately.
Quick surface restoration for coarse and fine finishing whetstones, even hard ones such as non-absorbent Gokumyo, Kouseki, DEBADO series or ones that easily get clogged. Use the coarse #150 Diamond side to flatten the whetstone surface quickly. Then, polish with the #500 Diamond side to get an ideal whetstone surface instantly.
The plastic storage case (intellectual property right registered) can be used as a holder.

With silicone rubber frame

2026
NEW

This is a large whetstones for adjustment designed to be placed on a surface for grinding. Its own weight allows for quick flattening, and it can be used immediately after lightly wetting it.

This is a grinding stone designed to be placed on a flat surface and used to grind the surface you wish to correct by rubbing it against the stone. Weighing approximately 1,600 grams, it provides stability during use. Be sure to keep the stone wet while grinding.

Knife Strop & Polishing Kit

For those who seek the finest long-lasting sharpness, please use this product for finishing.

With sticky stainless steel knives and the like, even finishing whetstones cannot smoothen the very small rough edges on the blade. This is where the knife strop shows its true value. By polishing the edge of the blade against this leather strap, you will be able to cleanly take off the burrs (the small ridges) and bring back its luster. To use it, spread the green stick (abrasive) on the back side of the leather and sharpen, before finishing with the front side. For those who want the finest long-lasting sharpness, this is an excellent tool for finishing.

KSW-485

Knife Strop & Polishing Kit (Long)

Maintenance Tools

Rust eraser / Polisher

Tool and polisher set for rust removal and mirror finishing.

Before
Rusted knife with scratches and tarnish. Using the eraser, whetstone, and sandpaper, remove rust and tarnish, then buff with the polisher to finish.

After
After removing rust and tarnish using this product. To restore the edge, sharpen the knife further with the whetstone.

Eraser Whetstone [Rust removal]

The entire surface is cleaned of dirt and rust using a rust-removing eraser. It's soft, so it's easy to use on the spine and back of the blade.

Rust removing using water-resistant abrasive paper and polish

Use a spray bottle to keep the waterproof sandpaper and the knife wet while sanding. Switch to finer-grit sandpaper as you go to remove scratches.

Polish with superfine particle abrasive C#4000

Apply C#4000 ultra-fine abrasive to the knife, pour a small amount of dish soap from the bottle, and mix until it forms a paste. Use a felt polishing pad to rub it in and polish the knife.

Polish with green rouge

For even finer polishing, apply the blue polishing green rouge directly to the blade and use a separate felt pad to polish until a shine appears.

Handle + Felt [Buffing]

Use the two included felt pads separately for the ultra-fine abrasive and the blue polishing green rouge, attaching them to the flat handle to polish.

Handle + Dry Sandpaper [Wood Sanding]

Use the two included felt pads separately for the ultra-fine abrasive and the blue polishing green rouge, attaching them to the flat handle to polish.

Dull / Glossy Finish Whetstone

A perfect result will be obtained by using "Kouseki" – a super finishing whetstone which promises a beautiful mirror finish.

This whetstone is used to restore the distinctive patterns on a blade that are lost over time due to constant sharpening and polishing. For final finishing, lightly sharpen the flat side, washer, etc., to cloud the soft iron and bring out the original patterns on the blade. We recommend you use it after sharpening with our super finishing whetstone "Kouseki." By using the dull finish whetstone on a blade polished as glossy as a mirror, you can enjoy the impeccable contrast of the cloudy pattern and lustrous shine.

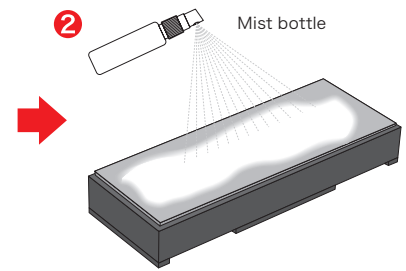

Continue working on the blade until the pattern is reflected in it.

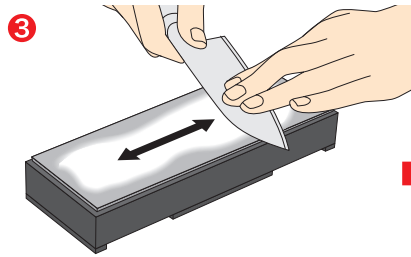

Before using this product, please polish it to a mirror finish using Suehiro Koseki #10000. Removing even the finest scratches with a liquid polish will result in an even more beautiful finish. (The image shows the product after polishing until the layered pattern is completely gone and the text is clearly visible.)

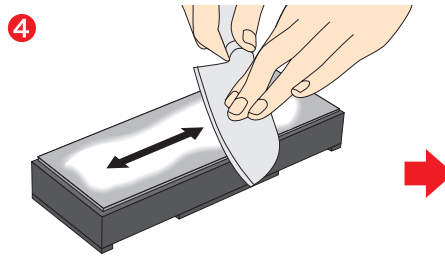

1 Sprinkle the included polishing powder onto the metal plate and spread it evenly across the surface.

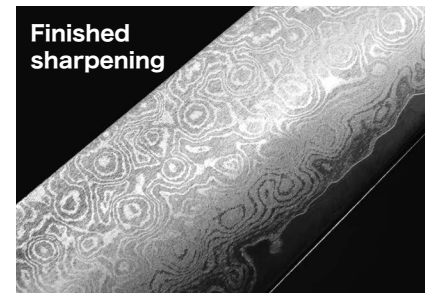

2 Using a spray bottle, mist the powder with just enough water to thoroughly moisten it without washing it away.

3 Just as you would when sharpening a blade with a whetstone while holding it firmly against the metal plate where you want the pattern to appear, move the blade back and forth, applying a light, even pressure to sharpen the entire surface thoroughly. Please exercise extreme caution during this process, as the surface is slippery due to the powder.

4 If the blade is double-edged, sharpen the back side in the same way as in step 3. Sharpen until a beautiful pattern appears, checking the pattern occasionally. (Use two different types of polishing powder depending on the blade. Using medium-grit followed by fine-grit is also a good approach.)

The polished steel sections gleam brilliantly, while the soft iron sections take on a soft, matte finish, creating a beautiful contrast.

We offer “spare parts” (Products with the  logo) for each series, but these items are sold separately from the standard products. Please check the prices of the relevant items below before purchasing.

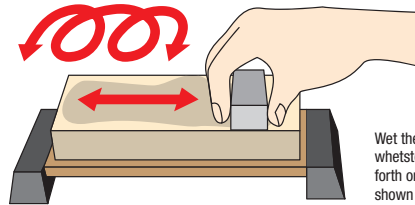

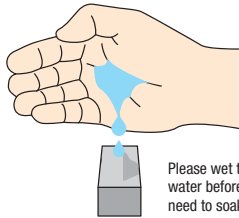

Artificial Nagura Whetstones / Dual Cleaner

Non-absorbent

Suehiro's Nagura whetstones are non-absorbent, so they're ready to use with just a quick splash of water. We offer a wide selection to match the grit size of your whetstone.

Features and usage of Suehiro Nagura whetstones

1. You can restore the sharpening power of a whetstone by rubbing its worn surface with a nagura whetstone.
2. For whetstones that feel too hard and cause the blade to slip, or whetstones that feel too soft and cause the blade to grip too much, you can use a nagura whetstone of the same (or similar) grit size to create a slurry and sharpen with that slurry to achieve a sharpening feel that matches the blade.
3. By rubbing the whetstone surface with a nagura whetstone of the same (or similar) grit size to create a slurry and letting it coat the blade while sharpening, you can achieve a finish that highlights the contrast between the base metal and the steel of a Japanese kitchen knife. (This results in a kasumi finish.)
4. With finishing whetstones, debris and shavings can clog the fine pores on the stone's surface, reducing its polishing power or causing the blade to slip. In this case, we recommend first cleaning the surface with a Nagura whetstone of a coarser grit, then using a Nagura whetstone of the same (or similar) grit to create a slurry and polish the blade while coating it with the slurry.
